Strategic Growth & Operational Realignment Statement

We have realized a 6.61% increase in average monthly gross profit and a 7.27% increase in total volume (\$5,022 in additional average monthly gross) compared to previous periods. This growth is driven by a complete overhaul of our pricing strategy and sales culture:

- **Market-Leading Pricing Model:** We successfully transitioned our door rate to the market average of \$225/hr. To ensure value delivery, we structured all labor operations to align with this pricing, ensuring technical execution matches our premium market positioning.
- **Revenue Protection & Discount Policy:** We implemented a strict "no labor discount" policy. By enforcing the use of specific miscellaneous codes for all adjustments, we have gained full transparency into our margins. This shift allows us to manage true discounts properly, preventing revenue leakage and contributing directly to the gross profit increase.
- **Advisor Sales Transformation:** The advisor team has pivoted from a cost-based sales approach to a convenience-focused model. Recognizing that our current customer base values time over money, our advisors now prioritize seamless service and efficiency. This cultural shift has allowed us to maintain higher margins while improving the customer experience.
